

## China Delegation of Building Materials Industry

August 1999

During the visit to Idaho, Mr. Zhang Renwei, Director-General, State Administration of Building Materials Industry, P.R. China, witnessed "first hand" the flammability resistance of InCide PC Cellulose Insulation. While holding in his hand the insulation material manufactured by Hamilton Manufacturing, a penny is melted using a blow torch. The ability of InCide PC Cellulose Insulation is unmatched by other insulation's to resist heat and flame, making it a very effective and safe insulating product.

Hamilton Manufacturing is marketing it's products to China where insulation is rarely being used. Environmentally the insulation is a winner. It can save energy that is generated by coal fired plants which have a huge impact on the air quality in most cities located in China.
